

Esmuflily - SMuFL / Ekmelos for LilyPond

Esmuflily is an extension for [LilyPond](#) that supports [SMuFL](#) compliant fonts, in particular, to facilitate the use of glyphs from [Ekmelos](#) : clefs, time signatures, note heads, articulations, etc.

Esmuflily provides [switches](#) to turn the SMuFL support on or off for individual types of graphical objects (clefs, note heads, etc.) and it defines additional commands and styles for SMuFL glyphs which are not available in LilyPond (note head styles, function theory symbols, etc.) So scores can benefit from both SMuFL's comprehensive character set and LilyPond's awesome Emmentaler font.

This documentation uses the [Ekmelos](#) font for all SMuFL glyph.

Esmuflily requires LilyPond version 2.24.0 or higher.

See [Ekmelily](#) for accidentals and key signatures.

5 October 2025

Download, Installation, Usage

Download

The folder `ly` contains the include files.

Copy the following files into an appropriate folder:

```
esmufl.ily
ekmd.scm
ekmd-template.scm
```

`ekmd-template.scm` is required only if no [metadata cache file](#) exists for the desired font.

For some fonts, a cache file is already available, e.g.:

```
ekmd-bravura.scm
ekmd-ekmelos.scm
ekmd-leland.scm
ekmd-sebastian.scm
```

Usage

Add the following lines near the top of your LilyPond input file.

```
ekmFont = FONTNAME
\include "esmufl.ily"
```

Esmuflily + Ekmelily

To combine Esmuflily with [Ekmelily](#) add e.g. the following lines near the top of your LilyPond input file.

```
ekmFont = FONTNAME
ekmSystem = TUNING
\include "cosmufl.ily"
\language "LANGUAGE"
\ekmelicStyle STYLENAME
```

The default values correspond with LilyPond:

FONTNAME	Ekmelos
TUNING	24, i.e. it includes <code>ekmel-24.ily</code>
LANGUAGE	nederlands in most tunings
STYLENAME	stc (Stein/Couper) in tuning 24

Fonts

Esmuflily requires a [SMuFL](#) compliant font.

It uses [Ekmelos](#) by default. Another font can be selected, either with the variable

```
ekmFont = FONTNAME
```

preceding the include file,

or with the command line option

```
-dekmfont=FONTNAME
```

Note that this option produces a warning 'no such internal option', which can be ignored. Warnings can be suppressed with the command line option `--loglevel=ERROR` or `--loglevel=NONE`.

Drawing paths

Esmuflily supports drawing paths instead of font glyphs, which allows e.g. to produce stand-alone SVG output. This requires the Scheme procedure `ekm-path-stencil` as it is provided for [Ekmelos](#) by the include file `ly/ekmelos-paths.ily`.

A trailing `#` in `FONTNAME` switches to globally drawing paths, i.e. it effects all SMuFL output except for the [markup commands](#) `\ekm-charf` and `\ekm-str`.

Note that spaces and other glyphs without a contour, as well as side-bearing and font features like stylistic alternates or ligatures are not available with paths. See the second output below:

```
\ekm-chars #'(#xE262 #xE566 #xEAA6 #xEAA5)
```

To draw Ekmelos glyphs as paths, add the following lines near the top of your LilyPond input file. A single `"#"` is equivalent to `"Ekmelos#"`.

```
ekmFont = "#"  
\include "ekmelos-paths.ily"  
\include "esmufl.ily"
```

Font Metadata

Esmuflily can use font-specific metadata provided by a [SMuFL](#) compliant [JSON](#) file or by a cache file. If the latter doesn't exist, the [JSON](#) file is read and a cache file is created to be used subsequently.

Note: In the JSON file, glyphs must be given with their canonical glyph name, not with the Unicode code point.

JSON file path:

```
MD_LOC/MD_NAME
```

MD_NAME is one of the file names:

1. FNAME_metadata.json
2. FNAME.json
3. metadata.json

FNAME is the FONTNAME in all lowercase.

MD_LOC is one of the locations (see [SMuFL](#) ch. 3.11):

1. PRIVATE_LOC
2. USER_LOC/SMuFL/Fonts/FONTNAME
3. SYSTEM_LOC/SMuFL/Fonts/FONTNAME

PRIVATE_LOC can be specified either with the variable

```
ekmMetadata = PRIVATE_LOC
```

preceding the include file,

or with the command line option

```
-dekmmetadata=PRIVATE_LOC
```

A trailing (or solitary) % in PRIVATE_LOC forces creating a cache file even if it already exists.

USER_LOC and SYSTEM_LOC are platform-specific.

	USER_LOC	SYSTEM_LOC
Linux	\$XDG_DATA_HOME	\$XDG_DATA_DIRS
macOS	~/Library/Application Support	/Library/Application Support
Windows	%LOCALAPPDATA%	%CommonProgramFiles% %CommonProgramFiles(x86)%

Cache file path:

```
EKMD_LOC/ekmd-FNAME.scm
```

EKMD_LOC is one of the locations:

1. a LilyPond include directory (usually the location of `esmufl.ily`)
2. MD_LOC (as for the JSON file)

Font Symbols

The musical symbols supported by Esmuflily are SMuFL-compliant glyphs given with their Unicode code point.

All symbols are assembled in a single table arranged according to type (usage), where some types correspond to LilyPond's graphical objects, like note heads, flags, rests, and clefs.

The standard table contains SMuFL recommended characters. The cache file `ekmd-FNAME.scn` can provide a font-specific table (beside the metadata) that is merged into the standard table.

The styles, names, tokens, and size ranges for musical symbols listed in this documentation come from the standard table. The font-specific details for [Ekmelos](#) or other fonts are listed separately after that.

```
\ekmMergeType TYPE TABLE
```

Merge TABLE into the table for TYPE. New styles, names, and tokens are added. Already existing ones are replaced. See `internals.md` for all supported types and their required table structures.

Use this command with care.

Note: The style `ekm` is used for internal purposes, (tremolo marks, arrows, percussion beaters, etc.)

Commands

Most of the commands, in particular, all markup commands always produce SMuFL output, independent of any [switches](#) . Other commands behave differently when the corresponding switch is turned off:

[[Ly](#)] Produces normal LilyPond output.

[[Err](#)] Causes an error or produces useless output.

Some commands with a corresponding LilyPond command are simpler implemented, e.g. they ignore properties, while a few provide additional features.

Some commands and properties accept one of the following special values:

- [EXTEXT](#) : A code point, a list of code points, or markup.
- [DEFINITION](#) : A string of tokens.
- [ORIENTATION](#) : Sum of axis and direction.

SMuFL glyphs are always accessed by code point ([EXTEXT](#)). See the file `ly/ekmelos-map.ily` at [Ekmelos](#) with definitions to access glyphs by name.

All commands have the prefix `ekm` or `ekm-` .

SMuFL switches

```
\ekmSmuflOn #'TYPE
\ekmSmuflOn #'(TYPE ...)
\ekmSmuflOff #'TYPE
\ekmSmuflOff #'(TYPE ...)
```

Turn the SMuFL support on and off, respectively, for one or more types of graphical objects. TYPE is one of the following symbols. Any other value is ignored.

These commands set/undo context and grob properties (usually the stencil) in the current bottom context, except for `colon` and `segno` which are set independently of a context and cannot be turned off.

<code>all</code>	All following types
<code>clef</code>	Clefs and clef modifiers
<code>time</code>	Time signatures
<code>notehead</code>	Note heads
<code>dot</code>	Augmentation dots
<code>flag</code>	Flags and grace note slashes
<code>rest</code>	Rests and multi-measure rests
<code>systemstart</code>	System start delimiters
<code>dynamic</code>	Absolute dynamic marks
<code>script</code>	Scripts
<code>textspan</code>	Text span
<code>trill</code>	Trill span and trill pitch
<code>lv</code>	Laissez vibrer
<code>colon</code>	Colon bar lines
<code>segno</code>	Segno bar lines
<code>percent</code>	Percent repeats
<code>tremolo</code>	Tremolos
<code>arpeggio</code>	Arpeggios
<code>tuplet</code>	Tuplet numbers
<code>fingering</code>	Fingering instructions
<code>stringnumber</code>	String number indications
<code>pedal</code>	Piano pedals
<code>fbass</code>	Figured bass
<code>lyric</code>	Lyric text

The following example demonstrates possible places for SMuFL [switches](#) : a `\with` block, a `\layout` block, and in the music stream. Note that `\ekmTremolo` works independent of the `tremolo` switch which is turned on after that.

```
\score {
  \new Staff \with {
    \ekmSmuflOn #'trill
  }
  \relative c'' {
    \ekmSmuflOn #'notehead
    \override NoteHead.style = #'triangle
    c4 a
    \ekmSmuflOff #'notehead
    \revert NoteHead.style

    \autoBeamOff
    a8
    \ekmFlag #'straight
    a <a d> a16 <a d>

    \ekmFlag #'default
    \ekmPitchedTrill #'slash #'bracket
    d2 \ekmStartTrillSpan #'(-4 . 0) e d4 c8. a16 \stopTrillSpan

    \ekmTremolo unmeasured { c4:16 a: }

    \ekmSmuflOn #'tremolo
    { c4:16 a: }
  }
  \layout {
    \context {
      \Score
      \ekmSmuflOn #'(flag dot)
    }
  }
}
```

Clefs

```
\ekmSmuflOn #'clef
```

Draw SMuFL clefs and clef modifiers.

"G" "treble" "french" ...	U+E050	gClef
"GG"	U+E055	gClef8vbOld

"indiandrum"	U+ED70	indianDrumClef

"tab"	U+E06D	6stringTabClef
"4stringtab"	U+E06E	4stringTabClef

Clef modifiers

Transposition and style are drawn with the fingering italic symbols for digits, parentheses, and brackets, and with the following special symbols (i.e. not with precomposed clef glyphs).

8	<i>8</i>	U+E07D	clef8
15	<i>15</i>	U+E07E	clef15

"G_8"
 "G_(15)"
 "GG^[4]"
 "F_(3)"
 "subbass^13"
 "C_2"

Change clefs

They are drawn either with a special glyph or with the normal glyph but smaller.

The relative font size for change clefs can be set with:

```
#(set! ekm:clef-change-font-size '(SPECIAL-SIZE . NORMAL-SIZE))
```

The standard value is '(1.5 . -2).

Time signatures

```
\ekmSmuflOn #'time
```

Draw SMuFL time signatures.

```
\ekmCompoundMeter TIME-SIGNATURE
```

Set the numeric time signature.

```
\ekm-compound-meter TIME-SIGNATURE
```

Draw the numeric time signature as markup.

Compound meters use the large plus sign between fractions and the small plus sign between the numbers in a numerator. Some rational numbers can be part of a numerator. If specified in a pair, e.g. (1 . 1/2) , this is treated as a single number without a plus sign in between.

  \ekmCompoundMeter #'((2 4) (3 8))
  c8 c c c c c c
  \ekmCompoundMeter #'((2 4) ((1 . 1/2) 4))
  c8 c c c c c c
  \ekmCompoundMeter #'(2 (1 . 1/2) 4)
  c8 c c c c c c
}

```

Cadenza signatures

\ekmCadenzaOn STYLE

Start a cadenza like \cadenzaOn and set a signature.

Styles

"X"		U+E09C	timeSigX
"~"		U+E09D	timeSigOpenPenderecki
'time-x	deprecat		
'time-penderecki	deprecat		

Staff dividers and Separators

`\ekmStaffDivider DIRECTION`

Draw the next barline with an indicator to split or recombine the staff and set a `\break`. The direction specifies the type of indicator (arrow).

DOWN		U+E00B	staffDivideArrowDown
UP		U+E00C	staffDivideArrowUp
CENTER		U+E00D	staffDivideArrowUpDown

`system-separator-markup = \ekmSlashSeparator SIZE`

Draw a system separator mark, corresponding to SIZE (set within a `\paper block`).

Size ranges

0		U+E007	systemDivider
1		U+E008	systemDividerLong
> 1		U+E009	systemDividerExtraLong

```
\new Staff
<<
  \new Voice {
    \relative c'' {
      \voiceOne
      g a b c
      \bar "||" \ekmStaffDivider #CENTER
    }
  }
  \new Voice {
    \relative c' {
      \voiceTwo
      e c f e
    }
  }
>>
```

Draw SMuFL note heads. The `harmonic` and `cross` glyphs are also used with commands like `\harmonic` and `\xNote`.

```

 U+F64C noteheadDiamondClusterHalf3rd
 U+F64D noteheadDiamondClusterHalfTop
 U+F64E noteheadDiamondClusterHalfMiddle
 U+F64F noteheadDiamondClusterHalfBottom

:

Note:

For intervals larger than a third (except for `square`) the drawn cluster is a stack of one bottom segment, M middle segments, and one top segment. Mid and Top are the staff positions of the middle and top segments relative to the bottom segment.

Interval	M	Mid	Top
4th	0	-	3
5th	1	2	4
6th	2	2 3	5
7th	3	2 3 4	6
octave	4	2 3 4 5	7
...			

The segment glyphs in [Ekmelos](#) are designed for these values.

However, in the implementation notes of SMuFL Note clusters, the octave cluster is said to have 3 middle segments, while the 6th cluster has 2 middle segments. The “appropriate number of middle segments” varies apparently depending on the font.

Note head markup

```
\ekm-note-by-number STYLE LOG DOTS DIRECTION
```

Draw a note with augmentation dots as markup. It does not support stem lengths. STYLE can also be one of the [note head styles](#) . LOG is usually in the range -1 to 10.

Styles

    \time 3/4
    R2. R2.*3 R2.*7 R2.*10
    R2.*35
    \override MultiMeasureRest.space-increment = 2.5
    R2.*35
    \break
  }

  \time 4/4
  R1
  \override MultiMeasureRest.staff-position = #1
  R1
  \override MultiMeasureRest.staff-position = #2
  R1
  \override MultiMeasureRest.staff-position = #4
  R1
  \override MultiMeasureRest.staff-position = #-1
  R1
  \override MultiMeasureRest.staff-position = #-2
  R1
  \override MultiMeasureRest.staff-position = #-8
  R1
}
```

Rest markup

`\ekm-rest-by-number LOG DOTS`

Draw a rest with augmentation dots as markup. LOG is in the range -3 to 10. The dots are vertically centered, contrary to `\rest-by-number`.

Used properties:

- `font-size (0)`
- `ledgers ('(-1 0 1))`
- `style ('())`

`\ekm-multi-measure-rest-by-number MEASURES`

Draw a multi-measure rest as markup, with the number placed centered above unless it is 1.

Used properties:

- `font-size (0)`
- `expand-limit (10)`
- `style ('())`
- `word-space`
- `width (8)`
- `multi-measure-rest-number (#t)`

`\ekm-rest DURATION`

Draw either a rest or a multi-measure rest as markup.

```
\ekm-rest-by-number #-1 #1
\ekm-rest-by-number #2 #2
\ekm-rest-by-number #3 #1
```

```
\ekm-multi-measure-rest-by-number #7
\ekm-multi-measure-rest-by-number #16
```

```
\ekm-rest { \breve. }
\ekm-rest { 4.. }
\ekm-rest { 8. }
```

```
\override #'(multi-measure-rest . #t)
\override #'(multi-measure-rest-number . #f)
\ekm-rest { 1*7 }
```

```
\override #'(multi-measure-rest . #t)
\ekm-rest { 1*16 }
```

System start delimiters

`\ekmSmuflOn #'systemstart`

Draw SMuFL system start delimiters, using `\ekm-system-start`.

```
\ekm-system-start STYLE HEIGHT
```

Draw a system start delimiter of HEIGHT in staff units as markup.

Used property:

- `font-size (0)`

Styles

'brace	}	U+E000	brace
'bracket	⌒	U+E003	bracketTop
	⌓	U+E004	bracketBottom

Bravura and Ekmelos styles

'brace makes use of Bravura's stylistic alternates or Ekmelos' size variants, each intended for a specific size range.

Dynamics

\ekmSmuflOn #'dynamic

Draw SMuFL absolute dynamic marks, using \ekm-dynamic.

\ekm-dynamic DEFINITION

Draw a dynamic symbol according to [DEFINITION](#) as markup.

DEFINITION must be either a single token or a sequence of the letters f, m, n, p, r, s, z, whose corresponding symbols are concatenated. This is slightly different from the usual interpretation of definition strings.

p	<i>p</i>	U+E520	dynamicPiano
m	<i>m</i>	U+E521	dynamicMezzo

Scripts - Expressive marks

```
\ekmSmuflOn #'script
```

Draw SMuFL scripts for expressive marks like articulations, ornamentations, performance indications, fermatas, repeat signs, etc.

```
\ekmScript SCRIPT-NAME #'(EXTEXT-UP . EXTEXT-DOWN)
```

```
\ekmScript SCRIPT-NAME EXTEXT
```

Create a script from [EXTEXT](#), either a pair for up and down, or a single value for both directions. If the latter is a list it must be enclosed in a list. SCRIPT-NAME is the symbol of an existing script like `accent`, `marcato`, `trill`, `turn`, `upbow`, `open`, `segno`, etc. It determines the vertical positioning of the script. [\[Ly \]](#)

```
\ekmScriptSmall SCRIPT-NAME #'(EXTEXT-UP . EXTEXT-DOWN)
```

```
\ekmScriptSmall SCRIPT-NAME EXTEXT
```

Create a script with a 3 steps smaller font size. [\[Ly \]](#)

Multi-segment spanner

`\ekmSmuflOn #'textspan`

Draw text spans assembled from SMuFL multi-segment glyphs.

`\ekmSmuflOn #'trill`

Draw trill spans assembled from SMuFL multi-segment glyphs, and SMuFL trill pitches.

See also [Trill spans and pitches](#).

`\ekmStartSpan STYLE TEMPO ATTACHMENT`

Start a text span or trill span. [\[Ly \]](#)

The style `trill` starts a trill span. A second style can be added to draw other glyphs, e.g.

`trill-vibrato-large`. Any other style starts a text span. An undefined style like `dashed-line` produces normal LilyPond output.

TEMPO is a number or a pair of numbers (rounded to integer) for the segments of the spanner. 0 is the main (medium) segment. Positive values mean faster (narrower) segments. Negative values mean slower (wider) segments. A pair ' (A . B) draws all segments from A through B, evenly distributed over the spanner. The available range of numbers depends on the style.

ATTACHMENT is an [EXTEXT](#) or a pair ' (EXTEXT-LEFT . EXTEXT-RIGHT) for the edge symbols. A single [EXTEXT](#) is equivalent to ' (EXTEXT . 0). It must be specified in a pair if itself is a list.

`#f` draws the standard glyph on the left and right edge according to the style.

`\ekmStartSpanMusic STYLE TEMPO ATTACHMENT MUSIC`

Start a text span or trill span at MUSIC. [\[Ly \]](#)

This is a music function that doesn't need the `textspan` or `trill` [SMuFL switch](#) turned on.

The image displays a musical score consisting of five staves, each with a treble clef and a common time signature (C). The notation includes various musical symbols and annotations:

- Staff 1:** Contains a series of eighth notes, followed by a wavy line, and then a series of eighth notes. A wavy line is also present above the staff.
- Staff 2:** Starts with a wavy line, followed by a series of eighth notes, a wavy line, and then a series of eighth notes. A wavy line is also present below the staff.
- Staff 3:** Contains a series of eighth notes, followed by a wavy line, and then a series of eighth notes. A wavy line is also present below the staff.
- Staff 4:** Contains a series of eighth notes, followed by a wavy line, and then a series of eighth notes. A wavy line is also present below the staff.
- Staff 5:** Contains a series of eighth notes, followed by a wavy line, and then a series of eighth notes. A wavy line is also present below the staff.

Measure numbers 13, 25, and 37 are indicated on the left side of the staves.

Trill spans and pitches

`\ekmSmuflOn #'trill`

Draw trill spans assembled from SMuFL multi-segment glyphs, and SMuFL trill pitches.

`\ekmStartTrillSpan TEMPO`

Start a trill span with the style `trill`. See [Multi-segment spanner](#). [Ly]

TEMPO is a number or a pair of numbers (rounded to integer) for the segments of the spanner, usually in the range 4 to -4.

`\startTrillSpan` is equivalent to `\ekmStartTrillSpan #0`

and to `\ekmStartSpan #'trill #0 ##f`

`\ekmPitchedTrill NOTEHEAD-STYLE PARENS-STYLE MAIN-NOTE AUXILIARY-NOTE`

Draw a trill pitch. For NOTEHEAD-STYLE see [Noteheads](#). For variable accidentals on AUXILIARY-NOTE see [Ekmelily](#). [Err]

`\pitchedTrill` is equivalent to `\ekmPitchedTrill #'default #'default`

Musical staff 1 (Measures 1-12): Treble clef, common time. Notes include half notes, quarter notes, and rests. Trills are marked above measures 1, 5, 6, 7, 8, and 12.

13 Musical staff 2 (Measures 13-24): Treble clef, common time. Notes include half notes, quarter notes, eighth notes, and rests. Trills are marked above measures 13, 15, 17, and 24. A sharp sign is present above measure 24.

25 Musical staff 3 (Measures 25-36): Treble clef, common time. Notes include half notes, quarter notes, and rests. Trills are marked above measures 25, 26, and 36. A sharp sign is present above measure 26.

37 Musical staff 4 (Measures 37-39): Treble clef, common time. Notes include half notes. A trill is marked above measure 37.

Laissez vibrer

```
\ekmSmuflOn #'lv
```

Draw SMuFL laissez vibrer ties.

```
\ekmLaissezVibrer SIZE
```

Draw a laissez vibrer tie after a note, corresponding to SIZE. [Ly]

```
\laissezVibrer is equivalent to \ekmLaissezVibrer #0
```

caesura

breathMarkComma

breathMarkTick

A musical staff with five lines. It contains six whole notes (semibreves) positioned on the first line of each measure. Between the notes, there are five breathing signs or caesuras: a comma (U+E4CE), a checkmark (U+E4CF), a double slash (U+E4D1), a double slash (U+E4D1), and a single slash (U+E4D1).

Colon and Segno bar lines

```
\ekmSmuflOn #'colon
```

Draw SMuFL colon bar lines.

```
\ekmSmuflOn #'segno
```

Draw SMuFL segno bar lines.

Note that both, `colon` and `segno` are set independently of a context and cannot be turned off.

  FUNCTION DURATION)
(ekm-tuplet-number::fraction-with-notes
  NUM-DURATION DENOM-DURATION)
(ekm-tuplet-number::non-default-fraction-with-notes
  NUM NUM-DURATION DENOM DENOM-DURATION)
```

Tuplet formatting functions. The last three draw `metronome` style notes for the specified durations.

```
(ekm-tuplet-number NUM DENOM)
```

Draw NUM:DENOM, or NUM only if DENOM is 0. Use the actual tuplet fraction for NUM or DENOM if `#f` is specified. It is called by the first four functions above, i.e. they are equivalent to:

```
(ekm-tuplet-number #f 0)
(ekm-tuplet-number #f #f)
(ekm-tuplet-number NUM 0)
(ekm-tuplet-number NUM DENOM)
```

```

  \tuplet 3/2 { c4. b a g }
  \bar "|"
}

```

Fingering instructions

`\ekmSmuflOn #'fingering`

Draw SMuFL fingering instructions specified with a digit or with `\finger`, as well as right-hand fingerings specified with `\rightHandFinger`, using `\ekm-finger`.

Note: The `\thumb` command always produces normal LilyPond output. Use `\finger "th"` to draw the corresponding SMuFL glyph.

`\ekm-finger DEFINITION`

Draw a fingering instruction according to **DEFINITION** as markup. If the first character is `*` the `italic` style symbols are drawn, else the `default` symbols.

```

String number indications

```
\ekmSmuflOn #'stringnumber
```

Draw SMuFL string number indications specified with `\NUMBER`, using `\ekm-string-number`.

Note: `\romanStringNumbers` overrides the SMuFL switch so that reverting with `\arabicStringNumbers` produces normal LilyPond output.

```
\ekm-string-number ARG
```

Draw a string number indication as markup. ARG is a number or string. For a number or a string representing a number, either the defined symbol is drawn or the number with the normal text font and a circle around. Any other string, e.g. a Roman numeral, is drawn in italic style.

```

The image displays three staves of musical notation, each showing a sequence of notes (c4, d, c, b, c) followed by a sustained note (c1). The staves are labeled with different pedal and sostenuto effects:

- Staff 1:** Shows a sequence of notes with a pedal symbol (Ped.) and a sustain symbol (*).
- Staff 2:** Shows a sequence of notes with a sostenuto symbol (S-P) and a sustain symbol (*).
- Staff 3:** Shows a sequence of notes with an una corda symbol (una corda) and a tre corde symbol (t.c.).

Harp pedals

`\ekm-harp-pedal DEFINITION`

Draw a harp pedal diagram according to [DEFINITION](#) as markup. Space between tokens is ignored.

`\ekm-harp-change EXTEXT Y`

Draw EXTEXT as markup with an ellipse translated vertically by Y. Used by the following change tokens.

<code>^</code>		U+E680	<code>harpPedalRaised</code>
<code>o^</code>			
<code>-</code>		U+E681	<code>harpPedalCentered</code>
<code>o-</code>			
<code>v</code>		U+E682	<code>harpPedalLowered</code>

```

Accordion registers

`\ekm-accordion NAME`

Draw an accordion register symbol as markup. NAME has a prefix for the register style separated by a space. "d" (discant) is the default and can be omitted.

Most of the symbols use precomposed glyphs. The others are composed using `accdnCombRH3RanksEmpty` (U+E8C6) etc.

Note: `#(use-modules (scm accreg))` is not required.

`\ekmAccordion NAME`

Set an accordion register symbol as a standalone music event. This is equivalent to

```
<> ^ \markup \ekm-accordion NAME
```

Names

Function theory symbols

\ekm-func DEFINITION

Draw a function theory symbol according to [DEFINITION](#) as markup. The definition string consists of several parts which are all optional:

 Paren Function , Bass , Soprano ^ Extra ... Paren

The bass symbol is placed below the function symbol.

The soprano symbol is placed above the function symbol.

The extra symbols are stacked vertically and raised to the right of the function symbol.

A leading/trailing parenthesis, bracket, or brace is placed separately before/after the entire symbol.

Used properties:

- `font-size` (0) for the function symbol.
- `func-size` (-4) relative to the font size for bass, soprano, and extra symbols.
- `func-skip` (2.5) for vertical distances.
- `func-space` (0.3) for horizontal space around the function symbol.

\ekmFunc DEFINITION

Set a function theory symbol as a music expression, for use in a `Lyrics` context. The symbol is drawn with a 4 steps smaller font size compared to `\ekm-func`.

DEFINITION is a string as described above, with a further optional suffix:

- Starts an extender line after the symbol.
- . Stops an extender line at the symbol.
- + Inserts the symbol between notes with `\set stanza`.
- * Dito but with the 4 steps larger font size of `\ekm-func`.

Note that the `Lyrics` context requires the `Text_spanner_engraver` to draw extender lines.

\ekmFuncList DEFINITION-LIST

Set a sequence of function theory symbols as music expressions, for use in a `Lyrics` context.

DEFINITION-LIST is a list of strings as for `\ekmFunc`.

T	T	U+EA8B	functionTUpper

V	Ṛ	U+EA8D	functionVUpper
v	ṛ	U+EA8E	functionVLower
0	Ṛ	U+EA70	functionZero
:	Ṛ		
9	Ṛ	U+EA79	functionNine

<	<	U+EA7A	functionLessThan
>	>	U+EA7C	functionGreaterThan
-	-	U+EA7B	functionMinus
+	+	U+EA98	functionPlus
o	o	U+EA97	functionRing
((U+EA91	functionParensLeft
))	U+EA92	functionParensRight
[[U+EA8F	functionBracketLeft
]]	U+EA90	functionBracketRight
{	<	U+EA93	functionAngleLeft
}	>	U+EA94	functionAngleRight
..	..	U+EA95	functionRepetition1
..+	..+	U+EA96	functionRepetition2
b	b	U+ED60	csymAccidentalFlat
#	#	U+ED62	csymAccidentalSharp
bb	bb	U+ED64	csymAccidentalDoubleFlat
x	x	U+ED63	csymAccidentalDoubleSharp
=	=	U+ED61	csymAccidentalNatural
~			

The tokens `b` `#` `bb` `x` `=` draw standard accidentals for chord symbols.

The token `~` draws a space with the dimensions of `functionZero` (U+EA70) . This is especially useful for empty extra symbols.

Ekmelos tokens

/D	∅	U+F644	functionSlashedD
----	---	--------	------------------

The following example uses `\ekm-func` in text scripts to attach function theory symbols to chords and spacer rest. It sets `\textLengthOn` and `TextScript.staff-padding` for a consistent vertical alignment.

```
\relative c' {
  \textLengthOn

  \override TextScript.staff-padding = #6
  <c e g bes>2_\markup \ekm-func "D^7 "
  <e g bes! c>_\markup \ekm-func "(D,3^7) "

  \override TextScript.staff-padding = #11
  <c e g c>4_\markup \ekm-func "T____"
  <g e' g c>_\markup \ekm-func "D^4^6"
  s_\markup \ekm-func "^-^-"
  <g d' g b>_\markup \ekm-func "^3^5"

  \key es \major
  \override TextScript.staff-padding = #7
  <g' b d>1_\markup \ekm-func "V#"
  <f as c e>_\markup \ekm-func "IV^7#"
  <ces es as!>_\markup \ekm-func "VI,b"
}
```

The following example uses `\ekmFuncList` in a `Lyrics` context to synchronise function theory symbols to music. The `Lyrics` context requires the `Text_spanner_engraver` and is aligned to a `NullVoice` context. It is taken from lsr.di.unimi.it/LSR/Item?id=967 and adapted for Esmuflily.

```
funcSoprano = \relative c'' {
  e4 e e( d)
  c4 d d2
  d4 e8 d c4 c
  d8( c) <b g>4 c2
}

funcAltTenor = \relative c'' {
  <c g>4 <bes g> <a f>2
  <a d,>4 <c a> <c a>( <b g>)
  <b e,>2 <g e>4 <a f>
  <a d,>4 d,8( f) <g e>2
}

funcBass = \relative c {
  \clef bass
  c4 cis d2
  f4 fis g2
  gis2 bes4 a8 g
  fis4 g c,2
}

funcAligner = \relative c {
  c4 cis d d
  f4 fis g g
  gis4 gis8 gis bes4 a8 g
  fis8 fis g g c,2
}

funcSymbols = \lyricmode {
  \set stanza = #"C major:"
  \ekmFuncList #'(
    "T,,3" " (*" "/D,3^7^9>" ")*" "Sp^9-" "^8."
    "S^5^6" "(D,3^7)" "D^2^4-" "^1^3."
    "(D,3^7-" "^8" "^7." "_" [Tp] +" "(D,7)" "S,3-" " ,2."
    "DD,3^8-" "^7." "D^5-" "^7." "T"
  )
}

Arrows and arrow heads

\ekm-arrow STYLE ORIENTATION

Draw an arrow or arrow head of STYLE according to ORIENTATION as markup.
Arrows can have glyphs for several orientations. The remaining orientations are achieved by flipping or rotating through 90° or 45°. All following six styles have glyphs for the 8 orientations N ... NW.

Styles

Percussion symbols

\ekm-beater STYLE ORIENTATION

Draw a percussion beater of STYLE according to ORIENTATION as markup.

Percussion beaters can have glyphs for several orientations. The remaining orientations are achieved by flipping or rotating through 90° or 30°. Most of the following styles have glyphs for the orientations N, S, NE, NW or N, S.

Electronic music symbols

```
\ekm-fader LEVEL ORIENTATION
\ekm-midi LEVEL ORIENTATION
```

Draw a fader (volume control) and a MIDI controller, respectively, as markup.
LEVEL ≥ 0 is a percent value.
LEVEL < 0 is a decibel (dB) value, e.g. -6.0 is equivalent to 50.
LEVEL is drawn as a label next to the control according to ORIENTATION . #f draws no label.
For the thumb position, LEVEL is rounded to the nearest integral percent value, limited to 100. If a symbol is defined exactly for this value, this symbol is drawn. Else if an empty control and a thumb symbol are defined, they are combined. Else the symbol for the value nearest to LEVEL is drawn.

- Used properties:
- label-format (#f): #f uses "~a%" for percent and "~adB" for decibel values.
 - font-size (0)
 - label-size (-4) relative to the font size.
 - padding (0.3)

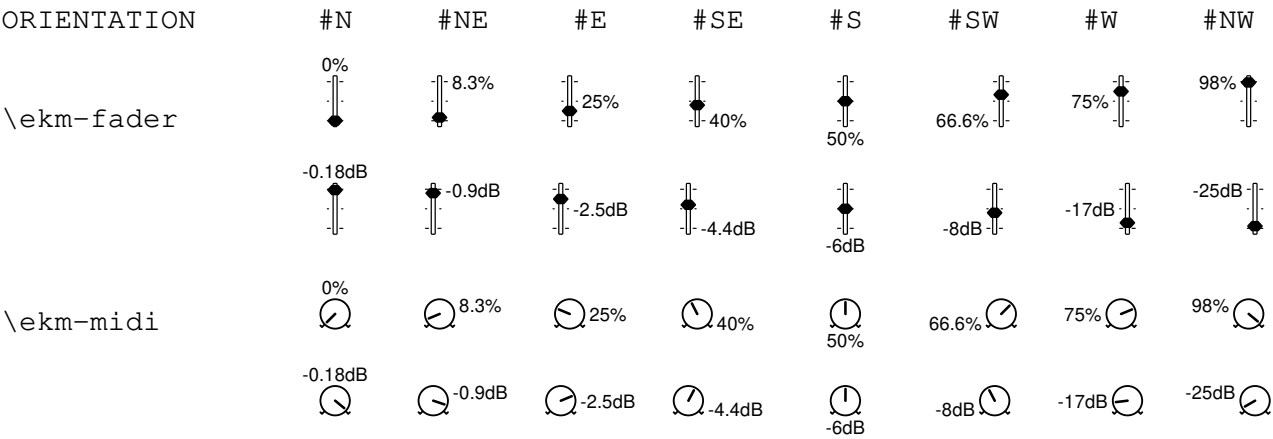

Symbols

\ekm-eyeglasses DIRECTION

Draw eyeglasses as markup.

	U+EC62	miscEyeglasses
---	--------	----------------

Ekmelos symbols

	U+EC62	miscEyeglasses
	U+F65F	miscEyeglassesRight

`\ekm-metronome COUNT`

Draw COUNT metronome strokes (tickings) as markup.

Used property:

- `word-space`

Ekmelos symbol

 U+F614 noteTick

`\ekmMetronome MUSIC`

Attach metronome strokes to each note, chord, or rest in MUSIC as a horizontally centered markup above the staff, using `\ekm-metronome`. The number of strokes equals the number of quarter note values of the respective duration (possibly rounded up).

```
\relative c'' {
  \ekmMetronome {
    c4
    c2.
    <g c>1
    R1
  }

  \time 6/4
  \ekmMetronome r4
  \ekmMetronome r1*5/4
}
```

Basic markup commands

They implement the underlying SMuFL output in Esmuflily.

`\ekm-char CODEPOINT`

Draw the glyph of CODEPOINT, or the point-stencil for zero.

Used property:

- `font-size (0)`

`\ekm-char ##xE048`

`\ekm-char ##xEB27`

`\ekm-chars CODEPOINT-LIST`

Draw the glyphs of the CODEPOINTS in the list adjoined horizontally without padding, or the point-stencil for an empty list.

Used property:

- `font-size (0)`

`\ekm-chars #' (#xE260 #xE2B4 #xE2B2)`

`\ekm-chars #' (#xE262 #xE566 #xEAA6 #xEAA5)`

`\ekm-chars #' (#xE1F0 #xE1F7 #xE1FC #xE1F7 #xE1F4)`

`\ekm-charf CODEPOINT FEATURES`

Draw the glyph of CODEPOINT with font features.

FEATURES is either a list of one or more strings, or the number of a stylistic alternate, or a negative number to draw the path instead of the font glyph.

#1 and #' (1) and #' ("salt 1") are equivalent. #0 and #' () do not set font features.

#-1 and #' (-1) draw a filled path. Any other negative number -N draws the outline of the path with thickness N which is scaled to the current font size.

This command is independent of [globally drawing paths](#) .

Used property:

- `font-size (0)`

`\ekm-charf ##xE242 #0`

`\ekm-charf ##xE242 #' ("salt 1")`

`\ekm-charf ##xE242 #' (2)`

`\ekm-charf ##xE242 #-20`

`\ekm-str STRING`

Draw STRING with the selected font, independent of [globally drawing paths](#) .

`\ekm-text EXTEXT`

Draw **EXTEXT** . Depending on the argument type, it calls `\ekm-char`, `\ekm-charf`, or `\ekm-chars`, or it draws markup.

`\ekm-text #'(#xE242 0)`

`\ekm-text #'(#xE242 "salt 1")`

`\ekm-text #'(#xE242 -20)`

`\ekm-text #'(#xE260 #xE2B4 #xE2B2)`

`\ekm-concat EXTEXT-LIST`

Draw the **EXTEXT**s in the list stacked in a line without padding.

`\ekm-line EXTEXT-LIST`

Draw the **EXTEXT**s in the list stacked in a line.

Used properties:

- word-space
- text-direction

`\ekm-line #'(#xE046 "al fine")`

D.C. al fine

`\ekm-line #'(#xE6D0 "with" #xE78E)`

`\ekm-line #'((#xE6D0 1) "with" #xE78E)`

`\ekm-combine CODEPOINT X Y CODEPOINT2`

Combine the glyphs of CODEPOINT and CODEPOINT2, where CODEPOINT2 is translated scaled by X,Y.

`\ekm-combine ##xECA5 #-0.5 #1.0 ##xE56E`

`\ekm-combine ##xEA7F #0.3 #0 ##xE87B`

`\ekm-cchar CENTER CODEPOINT`

Draw the glyph of CODEPOINT, centered horizontally if CENTER is CX or CXY , and vertically if CENTER is CY or CXY .

`\ekm-ctext CENTER EXTEXT`

Draw **EXTEXT** . Markup is centered like `\ekm-cchar` . A list of code points is centered only horizontally. A single code point (possibly with font features) is never centered.

This command is intended to draw symbols on stem.

```
\ekm-def MAP DEFINITION
```

Draw a text according to DEFINITION .

MAP is an alist of EXTEXTs mapped onto tokens (strings). A token which is a prefix of other tokens must be arranged after them in MAP, i.e. the correct order is "abc" , "ab" , "a" . A shared token (" ", "_", etc.) can be overridden. The special value #f draws nothing, i.e. the token is simply ignored.

```
(#(define my-map `(
  (".|:" . #xE040)
  ("tr#~" . (#xE262 #xE566 #xEAA6 #xEAA5))
  ("timp" . (#xE6D0 1))
  (" " . #f)
  ("w" . "with")
  ("box/" . , (markup #:box #:ekm-beater 'timpani-medium NE))
))
```

```
\ekm-def #my-map #".|:____tr#~"
```

```
\ekm-def #my-map #"timp w box/"
```

```
\ekm-number STYLE NUMBER
```

Draw the integer NUMBER according to STYLE, either as a sequence of decimal digit symbols or as a single number symbol (string and scale).

Styles

time	4
time-turned	7
time-reversed	1
tuplet	4
finger	4
finger-italic	4
fbass	4
func	4
string	④
scale	4
sans	4
roman	4
typewriter	4

```
\ekm-label ORIENTATION LABEL ARG
```

Combine a markup with another markup placed as a label next to it according to **ORIENTATION** (= #f ignores the label).

Used properties:

- font-size (0)
- label-size (-4) relative to the font size.
- padding (0.3)

```
\ekm-label #SE \ekm-char ##xE836 "G"
```

G③

```
\ekm-label #NW "Medium" \ekm-char ##xE78E
```

Medium 

```
\ekm-orient TYPE STYLE ORIENTATION
```

Draw the symbol of TYPE and STYLE according to **ORIENTATION** as markup.

```
\ekm-orient #'arrow #'black #NW
```

```
\ekm-orient #'beater #'mallet #NE
```

Extended text

Some commands accept an EXTEXT value, or a pair or list of EXTEXT values.

EXTEXT can be:

- A single code point (integer). Calls `\ekm-char`.

```
##xE695
```

- A list of a single code point followed by font features, i.e. one or more strings or a number 0 to 31 of a stylistic alternate, or a negative number to draw the path instead of the font glyph. Higher values are treated as code points (see below). Calls `\ekm-charf`.

```
#' (#xE626 "salt 2")
```

```
#' (#xE626 2)
```

```
#' (#xE626 -1)
```

- A list of one or more code points. Calls `\ekm-chars`.

```
#' (#xE260 #xE567 #xE262)
```

- Any markup. Note that the commands `\ekmTremolo` and `\ekmStem` interpret some strings as names of symbols.

```
#"poco a poco"
```

```
#(markup #:box #:ekm-char #xED19)
```

- `#f`. Draws the empty-stencil.

Definition string

Some commands and properties accept a DEFINITION value. This is a string of one or more tokens, each consisting of one or more characters. Their corresponding symbols are stacked in a line. Any other character in the string produces a warning and only the text created so far is drawn.

Shared tokens

Additional tokens that are always applicable in DEFINITION values.

The shared tokens in the standard table defines space markup:

<space>	\hspace #1	SP
_	\hspace #0.17	HSP
__	\hspace #0.78	THSP
___	\hspace #2	ENSP
_____	\hspace #4	EMSP

Orientation

Some commands accept an ORIENTATION value. This is the sum of axis (0, 1, or ± 0.5 for diagonal) and direction (± 1). The following symbols are defined for the 12 possible values. The last four values are intended for “bilateral” orientations. An unsupported value is substituted with N .

N	2	Y	+ UP
NE	1.5	0.5	+ UP
E	1	X	+ RIGHT
SE	0.5	-0.5	+ RIGHT
S	0	Y	+ DOWN
SW	-0.5	0.5	+ DOWN
W	-1	X	+ LEFT
NW	-1.5	-0.5	+ LEFT
NS	-2	Y	+ -3
NESW	-2.5	0.5	+ -3
EW	-3	X	+ -3
SENW	-3.5	-0.5	+ -3

The commands `\ekm-arrow` and `\ekm-beater` support all 12 orientations. Missing symbols are completed by flipping or rotating. Missing bilateral symbols are substituted with the symbols for N, NE, E, SE. Currently, only the arrow style `simple` in Ekmelos has glyphs for all 12 orientations.
